## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11 July 2003 has been entered.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent Application 2002/0034656 A1 (**Thompson et al.**).

**Thompson** discloses a metal coordination compound, specifically the compound labeled “vinylpyridines,” represented by the following formula indicated as (1), wherein M denotes Ir or Pt; n is 3 when the metal is Pt or Ir; R<sub>1</sub> and R<sub>2</sub> independently denote a hydrogen or a linear or branched alkyl group having 1-20 carbon atoms and capable of having a -CO-O- or -O-CO-; and CyN denotes a cyclic group containing nitrogen atom connected to M. The “vinylpyridine”

Art Unit: 2813

ligand shown in Fig. 49 is CyN showing  $R_1$  as a hydrogen (as the claim is presently amended to include) and  $R_2$  as an alkyl group. (See Fig. 49; paragraphs [0048], [0049], [0052], and [0183].)

Note in particular, that paragraph [0052] states in pertinent part,

“This invention is further directed to organometallic complexes of formula  $L L' L'' M$ , wherein  **$L$ ,  $L'$ , and  $L''$  are the same (represented by  $L_3M$ ) or different (represented by  $L L' L'' M$ )**, wherein  $L$ ,  $L'$ , and  $L''$  are bidentate, monoanionic ligands, wherein  $M$  is a metal which forms octahedral complexes, is preferably a member of the third row of transition metals, more preferably Ir or Pt.” (Emphasis added.)

### *Response to Arguments*

2. Applicant's arguments filed 11 July 2003 (Paper No. 17) have been fully considered but they are not persuasive.

In response to Applicant's continued traversal of the restriction requirement, Applicant did not *properly* traverse the restriction requirement in Applicant's election filed 8 August 2002, nor did Applicant timely petition the restriction requirement. The restriction requirement is final and will not be considered further. This does not mean Applicant would not be entitled to rejoinder of the device using the compound should the compound be found allowable. However, the compound is **not** allowable as presently claimed. Applicant has already received two actions on the merits. The non-elected invention will not be considered.

Applicant argues that the ligands shown in Fig. 49 are limited for use in  $L_2MX$  compounds only. Examiner respectfully but emphatically disagrees. Thompson discloses  $L_3M$ , wherein each ligand  $L$  is the same or different. It does not logically follow that that the statement in paragraph [0109] in Thompson that other  $L$  and  $X$  ligands suitable for  $L_2MX$  somehow suggests that the  $L$  ligands are (1) unknown (i.e. not disclosed, taught, or suggested) or (2) unsuitable for the  $L_3M$  compounds. Nowhere does Thompson suggest that the suitable ligands

Art Unit: 2813

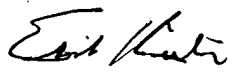

for  $L_2MX$  are unsuitable for  $L_3M$ . In short L is L. Accordingly the "L" ligands in Fig. 49 are suitable for the  $L_3M$  compounds.
